

ATS 2018 Highlights

Pediatrics Early Career Professional (ECP)

Get to know members of the Pediatrics Assembly

Is your research clinical, basic science or translational?

Clinical and Translational

Tell us about your research.

My research focuses on the assessment and impact of central airway collapse for respiratory outcomes in neonates.

Where do you see yourself in 5 years?

I plan to continue my role as the co-director of the Cincinnati Bronchopulmonary Dysplasia Center. In the role I hope to participate in testing and implementing novel strategies for treatment of neonatal lung and airway disease. I would also like to develop standardized practices for the assessment of airway dynamics in young children.

What is the major benefit of Pediatrics Assembly Membership?

The major benefit of Pediatric Membership is the networking and educational opportunities. Every year I meet people from all over the country and the world and have the chance to learn of their successes and failures. These types of interactions have spawned collaborations in both clinical and academic spheres.

Erik Hysinger, MD, MS

Assistant Professor

Cincinnati Children's Hospital
