Blood Thinners Could Boost COVID-19 Survival

By E.J. Mundell
HealthDay Reporter

Could Blood Thinners Be Crucial For Patients With COVID-19 Related Clots?

Lipi Roy, MD, MPH Contributor

I’m a doctor who writes about addiction, nutrition, mindfulness as well as social and criminal justice.

Giving blood thinners to severely ill Covid-19 patients is gaining ground

Blood thinners show promise for boosting the survival chances of the sickest covid patients

New York hospital system’s observational study looked at 2,733 patients in and out of the intensive care unit.
Myth

• Ventilators kill COVID Patients

• Hydroxychloroquine is a miracle drug for COVID

• COVID will disappear as the weather warms up

Reality

• Ventilator mortality is similar to that of ARDS patients

• HCQ currently shows no benefit, may deprive other patients of efficacious medicine, and at worst causes harm

• There is no association between temperature and COVID
Thorlund et al Lancet April 24, 2020
